

How to Install Your Endura JL/U Jeep Cargo Gap Mat

Locate the OEM Floor Tie Downs used for Cargo Gap Mat installation.

The floor tie downs used to secure the Cargo Mat are located just behind the rear seats.

Step 1. Flip open the plastic cover on one of the tie downs.

Step 2. Unscrew the Torx screw and remove the tie down.

Step 3. Align the Cargo Gap Mat grommet with the threaded hole for the tie down.

Step 4. Place the tie down over the Cargo Gap Mat and insert the Torx screw.

Step 5. Reinstall the tie down to secure the Cargo Gap Mat.

Step 6. Close the plastic tie down cover and repeat for other side.

Instructions: With rear seats folded down, use a T30 Torx bit to remove existing floor tie downs. Align Cargo Mat grommets over bolt holes, then reinstall cargo hooks with Torx tool. Secure upper part of the mat to the carpeted seat back with Velcro strip on back of mat. If necessary, move seats into the desired configuration with the zipper open.
